

35. A defective recombinant adenovirus consisting essentially of;
- the ITR sequences,
  - an encapsulation sequence,
  - a heterologous DNA sequence, and
  - all or part of the E4 gene.--

**In the Specification:**

At page 2, line 8, please replace "abovementioned" with --above mentioned--.

At page 8, line 25, please replace "promotor" with --promoter--.

At page 8, line 26, please replace "promotor" with --promoter--.

At page 8, line 28, please replace "promotor" with --promoter--.

At page 8, line 30, please replace "promotors" with --promoters--.

At page 9, line 1, please replace "heterologus" with --heterologous--.

At page 9, line 12, please replace "supression" with --suppression--.

At page 9, line 29, please replace "promotor" with --promoter--.

At page 11, line 9, please replace "promotor" with --promoter--.

At page 13, line 11, please replace "neurogegenerative" with --neurodegenerative--.

At page 15, line 3, please replace "Polym rase" with --Polymerase--.

At page 17, line 14, please replace "promotor" with --promoter--.

At page 17, line 29, please replace "promotor" with --promoter--.

At page 17, line 30, please replace "promotor" with --promoter--.

At page 18, line 31, please replace "Moveover" with --Moreover--.

At page 20, line 24, please replace "heterlogous" with --heterologous--.

At page 21, line 28, please replace "glucorticoid" with --glucocorticoid--.

At page 25, line 37, please replace "describe" with --described--.

At page 27, line 9, please replace "oligonucletide" with --oligonucleotide--.

**REMARKS**

**Amendment of the Specification**

Applicants have amended the specification to correct several typographical errors. No new matter has been added.
